

How to Use Your STR Mileage Log

SKU TAX-001 • STR MILEAGE LOG

What the IRS requires (Pub 463)

Four things per trip: date, destination, business purpose, miles. This log captures all four — plus more — and auto-calculates your \$ deduction at the current IRS rate.

First-time setup (3 min)

1. Open tab **Settings** — cell B5 is the current IRS rate (\$0.70 for 2026). Update every January 1.
2. Tab **Settings** col E rows 11+: replace sample properties with yours.
3. Tab **Settings** col G rows 11+: customize purpose list if needed (keep generic: "Supplies run" covers many).

Every time you drive

Open tab **Mileage Log**. Fill a row:

- Date
- Property (dropdown)
- Destination (Home Depot, airport, guest home)
- Business purpose (dropdown)
- EITHER Start Odo + End Odo (cols E + F) — formula subtracts
- OR typed Miles (col G) — formula uses this if E + F empty
- Notes (optional)

Column K shows ✓ when the row is complete, ⚠ if anything required is missing.

Reading the outputs

- **Monthly Summary**: miles + \$ per month, across all properties
- **YTD Dashboard**: totals + breakdown by purpose

At tax time

1. Print tabs 3 + 4 to PDF (File → Print → "Monthly Summary + YTD Dashboard").
2. Send to CPA. That's it.
